village itself was being pressed by the administration to increase its productivity at the same time that it was being pressed to supply the administration with more labor. In turn the villagers tried to press the Mbuti into supplying them with more food. Accustomed to a bare subsistence economy, the Mbuti could never quite see the necessity, nor did they altogether feel it was right or that it would be pleasing to the forest. Their belief, as far as I could determine, was not so much that they would be punished by the forest, but rather that the hunt would "be closed," that they would not get the unlawful surplus, that they might not even get enough for themselves.

To counter this the villagers offered divers kinds of medicine[9] for use in the forest, and agreed to make even more powerful medicine in the village. Sometimes the villagers offer to come into the forest, with a ritual specialist, to make medicine. The Mbuti tend to allow this, as it is profitable to them. Occasionally, however, the habit lingers, and whether or not *anjo* was originally a village or an Mbuti custom, it is now considered as a village trick, and disliked as such. *Anjo* is made by taking an antelope horn and filling it with a paste made from special parts of the antelope, charred black. This paste is then applied with a stick to the body of the hunter, to convey to him the senses of the animal.

This custom could sit perfectly well among the archers, where hunting is on a more individual basis. But among the net-hunters its use was taken as a sign of desire for personal gain above communal gain. On one occasion, when the hunting was not particularly good, *anjo* horns were rounded up from all over the camp, eight in all, and destroyed in the central fire. There was some protest from the owners, but not much. It was generally agreed that this made everyone the same, and that was how things should be.

From all the above, and from the rest of the disputes recorded in my notes, totalling 124, not counting the petty daily squabbles of no apparent import other than as an indication of bad temper, one of the most significant features is the small number of cases in which any

[9] Among these medicines is that encouraged by the Arab slave traders in search of ivory, specifically to give success in the elephant hunt. Known as *emumba*, *ishumba*, and divers other spellings, it is sometimes confused with a love medicine of the same name, and even more frequently with the *molimo* of the Mbuti, the word *emumba* or *lumumba* being used to describe the Mbuti *molimo* when speaking in KiNgwana, language of the Arabized Bantu tribe. It is perfectly possible that the two practices became intermingled, both, from the Mbuti point of view, being concerned with the pleasure of the forest.

throughout his life. It is also a question of friendship with the villager, but for him the relationship is further compelled by his belief in his own tribal lore, a compulsion not felt by the Mbuti. The Mbuti sometimes exploit this relationship with a *karé* as they may also do with their *kpara* for whom they feel no friendship, knowing that the strength of tribal lore, and the fear of supernatural sanctions upon themselves, will bring at least a grudging response.

Although essentially an individual relationship rather than a band relationship, failure on the part of an Mbuti to respond to his *karé* is considered by the villagers as a violation of village law, and can be made into a lineage/lineage or a band/village issue, but with predictable lack of success because of the absence of any effective agency of control. However, the attempt is sometimes made, and the band may at least be held responsible, in violation of *karé* brotherhood, for the actions of one of its members.

None of these formal relationships, then, brings about much effective economic exchange, and the political relationship is correspondingly ineffective. The mechanisms for political relationship are there, but their use is made impossible by the whole process of flux in Mbuti society. At the best those mechanisms are taken up and used momentarily when it is found to be mutually advantageous.

Individual Economic Relationships

There is, however, the last level, that of the nuclear family to the nuclear family, by which the band relates to a village. This is the effective level at which the bulk of economic exchange takes place among the Epulu Mbuti, and among most other net-hunting bands I have seen. In view of the flux that characterizes Mbuti society, it is indeed the only level that could provide any realistic basis of relationship.

It may not even necessarily be a family-to-family relationship. Individual members of the Mbuti family may go their own way and relate as such to village individuals. But once formed, these relationships are likely to remain fairly constant, for as long as the Mbuti family is hunting within that territory, or within reasonable reach. Several such attachments might be formed by the Mbuti, though generally not more than one in any one village. This leads to effective economic exchange but it provides no basis whatsoever for relating the band to the village, and it offers the villagers no more opportunity for control than they already have; namely, the fondness of the Mbuti for village luxuries.

into paste. Then, using a finger, she daubs the fresh cloth, which may be white, fawn, brown, or blue, with bright splotches of red. If she is using the fruit juice she carefully collects it in a cup made from the hard shell of some forest fruit, and with little twigs she draws fanciful patterns of straight lines, crisscrossing the cloth with unconventional Pygmy geometry. When the cloth is finished she throws it over the roof of her hut to dry, and looks around for something else to do.

Women usually work in twos or threes for company, and nearby a friend will be attending to some other womanly task. They spend hours at a time making the elaborate belts which hold the bark cloth in place. The material culture of the BaMbuti is minimal, and simplicity and utility are usually the main characteristics. But there is nothing simple about the belts they make. A single belt takes several weeks. First the vine has to be collected, dried, and shredded. Then the strands are tied around a stout twig in the ground. The woman holds the stick firmly between her toes and pulls a number of the strands to form the core around which she braids an outer binding. There may be as many as two hundred braided lengths to a single belt, bound decoratively in the center. Each end is worked into ties for fastening the belt tightly so that it will not only hold the bark cloth in place but also support knives, machettis, and the bundles of roots and other things that Pygmies tie to their belts while on the trail, to leave their hands and arms free.

The same vine, nkusa, is used for making hunting nets. After it has been shredded it is deftly rolled on the thigh, one strand being rolled into the end of the next so that when two strands are twined together a woman can present her husband with a length of stout cord long enough to add several feet to the family hunting net. Net-making is virtually a full-time occupation, and one in which both men and women indulge whenever they have both the spare time and the inclination. Few occupations are strictly reserved for either men or
